

Science Basics - Curriculum Notes

Topic: The Solar System

Key Concepts:

1. The Solar System consists of the Sun and all objects bound by its gravity.
2. Major components:
 - Planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune
 - Dwarf planets: Pluto, Ceres, etc.
 - Moons: natural satellites orbiting planets
 - Asteroids and comets
3. Example Question:

Explain why Earth is suitable for life.

Step 1: Earth has liquid water, which is essential for life.

Step 2: Earth has an atmosphere that protects from harmful radiation.

Step 3: Earth has a stable climate and moderate temperatures.

Practice Questions:

1. Name three dwarf planets in the Solar System.
2. What is the role of gravity in the Solar System?
3. Why do some planets have more moons than others?
